

FIRST PHASE PEGASO PARK COMPLETED

25-05-2009

The public space for the new business area Pegaso Park, West 8 designed for Inmobiliaria Urbanitas, has recently been completed. For the first time in Spain, the public space defines the quality of a business development for offices, retail, hotels and service buildings. The concept consists of various public spaces which create a clear address for the new enterprises and, at the same time, give the entire space a distinct identity, using the tools of landscape and urban design.

Within a given infrastructure and massing, West 8 has designed the public space, on a surface of more than 8 hectares, as well as the master plan for the architectural strategy, the programmatic specifications and the servicing of the private plots. The central public space is dominated by large existing or transplanted trees and a strong pattern of circular squares and paths. Underneath the crown of the mature trees, the continuous carpet of grass and 30 little fountains complete the impression of a fresh green garden.

The strong statement of the public space will be continued onto the private parcels, to be developed in the coming years, by clear regulations for the architects and future owners, to establish a continuous park landscape.
