

FRIGATE - THE PETR AND PAVEL SHIP

2015, St Petersburg, Russia

The children's playground in New Holland is one of the new main attractions of the island. Designed by [West 8](#) in collaboration with Richter Spielgerate GmbH /AFA Alexander Frontov and Architects, this playground is meant for children of all ages.

This one-of-a-kind playground has been modeled after the hull of the frigate ship The Petr and Pavel, built at 80% of the original scale and measuring 26 meters long and 6 meters high. The original ship was built by Peter the Great himself in Holland. This ship has been outfitted in keeping with the traditions of Russia's master shipbuilders. The interior space is divided into several levels of play spaces, each in accordance with all the standard safety measures. Here the island's littlest visitors will find themselves as proper sailors amid slides, ropes, canons, telescopes and steering wheels – all elements that immerse them directly into the history of the island and its founder, Peter the Great.

Next to this playground is a small shelter designed to allow parents to comfortably keep an eye on their children as they play.
